

Invisalign Clincheck

Your 'clincheck' is attached to the email sent from treatmentviewer@aligntech.com and can be downloaded and opened with the password on the second email.

Features

The clincheck is a virtual 3D model of your teeth. The initial position is a record of your teeth as they are now. When you click the play button you will see your teeth change. Each change represents one aligner. The last position in blue on the timeline at the bottom shows where I am intending to position your teeth. There may be some additional stages, in grey, which can be ignored. These are only used if I need to move some teeth a little further.

Please explore the the clincheck. There is a diagram below to explain the features. You will not change any aspects of your intended treatment, only I can do that.

If you have been sent more than one clincheck it means that there are options which we can discuss. There may be benefits to following one or other plan.

Confirmation of Treatment

At your next appointment we will discuss the planned treatment and I will be happy to answer any questions you may have. When you confirm the treatment is to your liking I will arrange for the aligners to be fabricated. They will be ready for your next visit.

However, if you are happy with the planned outcome and do not feel it is necessary to come in and discuss it with me please email me to confirm that you would like to proceed. We can then dispense with the 10 minute clincheck discussion appointment and go straight to the fitting appointment.

Fitting Appointment

This appointment is very simple and you will have your first set of aligners fitted. I do not place attachments at the start. These will be bonded at the next appointment during the phase you are wearing aligner No. 3.

Extractions

If your treatment requires extractions to be carried out these should be arranged to be completed during aligners 1 and 2.
